ELISA Kits, Antibodies,
Deficient Plasma and Serum,
and Purified Proteins for
Therapeutic Drug Discovery

Therapeutic interventions for the complement system, a critical component of the innate immune system, aim to treat diseases caused by its dysregulation. Drug discovery is exploring the therapeutic opportunity from inflammation to autoimmune disease. This field involves developing inhibitors and other agents that target different pairs of the complement cascade, from initial activation pathways to key proteins like C3 and C5, and the final effector molecules.

Assaypro provides a wide range of products to support the drug discovery research. Our product line includes ELISA kits, antibodies, deficient plasma and serum, and purified proteins.
